

1. What is time complexity of searching an element in an unsorted array?
2. Write a function to find the second largest element in the unsorted array without sorting?

3. Print the following pattern:

```
      1
     2 3
    4 5 6
   7 8 9 1
```

4. You are given a string of length 'n'. You need to find the index of the first unique character present in the string. If there are no unique characters return -1.
(For e.g: Input: GOCODER, output: 0)
5. How do you remove the duplicates from the sorted array?

1. What is worst case time complexity of the Quick Sort?
2. Create the pattern:

```
      *
    * * *
  * * * * *
* * * * * *
```

3. Find the intersection between two sorted arrays?
4. Write the program to multiply two matrices?
5. Detect the loop in the linked list:
Given a singly linked list, detect if there is cycle in it. Solve it in $O(n)$ time and $O(1)$ space.

1. What is the time complexity of merging two sorted arrays of sizes m and n ?
2. Write the program to reverse a linked list?
3. Write a program to check if two arrays are equal?
4. Print the pattern:

```
1111
000
11
0
```

5. You are given an array of size ' n '. Find all palindromic numbers from size 1 to n .
